Admission Rate = number of admissions divided by total served during the year.

US Admissions During Year uses data from states reporting data only. States are only included in "US Total Served" if they also reported data on admissions.

US Total Served During Year is calculated using data in URS/DIG Table 3b, State Total Served During Year is calculated using data from URS/DIG Tables 3a and 3b.

This table uses data from URS/DIG Tables 3a, 3b, and 6.

Overall Other Psychiatric Inpatient data is for FY2002.

6 Hospital None

Other Inpatient Average LOS for residents at end of year for other psychiatric inpatient is not available. Data for Other Psychiatric Inpatient is for FY02. Data for Other Psychiatric Inpatient Admissions comes from a database of discharge summaries. Admissions were calculated by looking at all discharges 2 months post FY02. Data is not currently available for the rest of FY02 because there is typically a lag of 6 months between discharge and receipt of discharge summary data. Base on previous years data, there may be an additional 44 people who were admitted in FY02 who have not been discharged by Sept. 30, 2003.

Residential None

Community None

Overall One CSB was not able to provide total served and total admissions broken out by age group. They had 300 patients on books and 331 admissions. I added in a row for this CSB and a revised total row but did not change the calculated totals in the spreadsheet.
